

## Better Water, Better Air, Better Health.

### **Better Health:**

*Water-Flo is continuing to provide essential services for our clients during this difficult time. If you need service and have concerns about having our team in your house, please give the office a call to discuss our safety processes and the urgency of your situation. In many cases, we can enter through the basement and avoid all contact. If you have service scheduled and are not feeling well, please give us a call to reschedule. We hope that you are staying home and staying safe. Please contact us if you have any questions or concerns about your water, water systems or radon.*

*Be well- The Water-Flo Team*

**"Better water, better air, better health"** is Water-Flo's motto and we're here to help you with your water and radon concerns and problems. So much of our health is determined by what we put into our bodies; start with the basics - air and water.

### **House Projects!**

#### **What are you tackling?**

With all this time at home, a lot of us (the Water-Flo team included!) are tackling the projects that we've not had time

to do before or that we were planning for this Spring anyway. Our March newsletter had some tips on Spring maintenance for your water and treatment systems. If you missed it, you can find it here: **March**

**Newsletter.** Water-Flo can help you with your home improvements by upgrading your treatment systems, solving your water problems or checking your home for radon. Give us a call- we're here for you!

### What we do:

Water-Flo provides emergency services for out of water situations. When that happens we often have to pull the well pump. Check out the video of one our latest pump jobs. This house had a LOT of iron in their system! Check our website for [Emergency](#) information.

### 5 Star Review

We love to hear from our customers and how we've helped address their concerns or solve their problems. This is one of our most recent testimonials:

*"I had an issue late Sunday into early Monday this week with my water pressure. My well pressure tank went bad. I called several places and this was the nicest and actually got back to me right away and squeezed me in the same day. Quality parts and professional install. Thanks again!"*

### Ask The Expert

**Question:**

Is it too late to test for radon?

**Answer:**

It's never too late to test for radon! It's usually recommended to do it in Winter only because the house is closed up and it will provide a more accurate reading. But, follow the directions on the test, or, of your authorized radon testing and mitigation company and you'll still get an accurate result. It's recommended to test for radon in the air every 2 years (whether you have a mitigation system or not) or if you change the use of your living space- like finishing the basement.

**Any questions or concerns please give Water-Flo a call!**

**We are your full service well pump, water treatment and radon company. Proudly serving Connecticut for over 27 years. Your referrals and reviews are appreciated! Follow us on FaceBook for water and radon information and to see what we're up to.**
