Improvements at Water-Flo

At Water-Flo we are always looking for new and better ways to serve our clients. Recently we've made two improvements and added a new product:

- For our customers in New London, Middlesex and New Haven Counties, our annual maintenance contract is now available for purchase (click [here](#) for a list of towns included) and we've improved the value of all three contract options. For all maintenance contract types we've increased the number of covered visits: from 2 to 3 visits for Water Treatment and Well Pump Contracts; from 3 to 4 visits for the Combination Contract. This year, the Combination Contract also includes a free radon in air test. If you missed the maintenance contract sent out via e-mail on September 7th it's not too late; sign up now and get a full year of benefits. The contract descriptions and on-line payment are available here: [2019 Maintenance Contract](#).
- Our [website](#) needed a face-lift and it's now easier to use and has more resources to help you with your home water and radon systems. If you can't find the answer in our [Frequently Asked Questions](#) you can always give us a call. On-line [Bill Pay](#) is still available and easier to navigate. And if you're wondering about the history and faces behind Water-Flo, you can find that information on our [About Us](#) page. We hope you'll be as thrilled with the new site as we are!
- If you're worried about leaks from your water systems, we have a new product that can help. While it doesn't happen often, well tanks and water treatment systems can spring a leak. Even the most thorough inspection can't reveal when a pressure relief valve may blow or a brine drum will overflow. This new product will turn your well pump off if a leak develops around the equipment. Please contact our office for more information about this preventative safety feature.

Meet Our Team

Scott Allen, Service Manager

Scott has worked for Water-Flo a little over four years. As Service Manager and a licensed J-2 technician, his responsibilities are service, installs and providing the best experiences for our customers. The customer relationships is one of the things he loves about working for Water-Flo! Scott grew up in East Haven and now lives in Deep River in a new home he purchased with Brigid (our office manager) and their "child", a black lab mix. In his free time, Scott enjoys traveling to Canada and upstate NY, Sunday football, hunting and working on the house. His personal mantra: "Don't wish for it, work for it."

Ask The Expert

Questions about your water or air quality? Here is your forum... Submit questions for next month and follow us on [FaceBook!](#)

Question: I don't know where my well is. How can I find it?

Answer:

If you don't see your well cap, then it is likely hidden by the landscaping or the well is buried. If the well is buried it can often be located with a well locating device. Homes built after 1971 should have a "well completion report" filed at the town hall. This document will give you all of the data on your well plus the location if its been buried. We recommend figuring out where your well is before you have a problem!

Please contact Water-Flo if you have any questions about your water system.

More tips and answers to your questions can be found at our website: www.waterflo.com
