Best regards - The Water-Flo Team

Water-Flo Gives Back

Water-Flo is working to give back to our communities and organizations that are important to us. For the month of August, the charitable organizations we supported were:
[Clinton Volunteer Fire Department](#)
[Madison Land Conservation Trust](#)

Problem? Solution!

A recent visit to a city friend, with chlorinated city water, reminded us why we love our well water! To combat the chlorine taste and odor they were using a filter pitcher. It worked well, but it's summer and we were drinking a lot of water! There wasn't always enough water for everyone and we must have refilled the pitcher every other hour! If you're using a filter pitcher, purchasing cases, or cooler-sized bottles of water, consider exploring the [Kinetico K5](#) point of use filtration system.

This state-of-the-art reverse osmosis system is designed to conquer any water quality challenge. The K5 is the ultimate solution, combining convenience and affordability with an endless supply of high-quality water. By owning a K5, you can rest assured that you're providing your family with the highest water quality at the best value. These are some of the K5 features:

- QuickFlo® Technology

Unlike any other system on the market, the K5 produces water faster than ever, eliminating the need to ration or wait for your water.

- 99% Contaminant Removal

The K5 significantly reduces more impurities than any other drinking water treatment unit (certified by WQA to NSF/ANSI Standard 58 for PFOS/PFOA removal.)

- Customized for Your Needs

The K5's customizable, multi-stage filtration, allows it to be tailored to address your current water challenges or any future ones that may arise.

- EverClean® Rinse

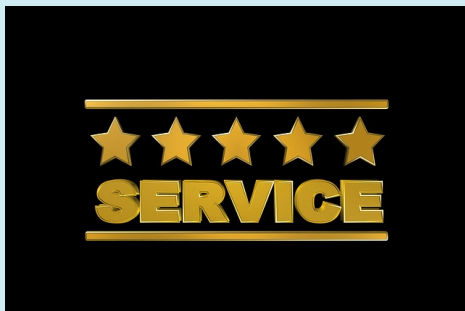

The K5 system utilizes high-quality water to clean itself, ensuring top performance and prolonging the life of the filters.

- Convenience

Stay on top of filter changes and prevent any issues with the MACguard® Filter and PureMometer® Filter Life Indicator. With quick-disconnect filter cartridges, replacing filters has never been easier.

Water-Flo uses a K5 system in the shop for our water! Give us a call to discuss solutions.

Water-Flo Aims for 5 Stars

"We had an out-of-state company install and service our system for acidic water many years ago. Recently, my SIL recommended Water-Flo to me. E-mail contact.. appointment made quickly.. service completed by Jeremy

T.. excellent! And cost less than the original company's basic servicing! Definitely recommend 100%."

Ask The Expert

Question:

The area around my well has been flooding with all the recent rain. Do I need to do anything?

Answer:

Assume your water is contaminated if floodwater has reached your well and do not use it for drinking until you know it is safe by having it tested. During and after flooding, private wells and springs can become contaminated with bacteria, microorganisms and other pollutants from sewage, heating oil, agricultural or industrial waste, chemicals, and other substances that can cause serious illness. Testing is the first step to find out what treatment is necessary. Disinfection should be performed by a professional water treatment company, like Water-Flo! If flooding is an ongoing problem you may need to explore re-grading of the area.

Give us a call for more information and water testing and solutions.
