

Better Water, Better Air, Better Health.

To Our Customers:

As we enter the holiday season, we would like to take this opportunity to express our heartfelt gratitude to all our customers. We owe our success to your trust and support. We hope that you will continue to support local businesses, like ours, as small businesses are the heart of our community. We are truly blessed to have such amazing customers who continue to choose us for their needs.

Happy Thanksgiving! - The Water-Flo Team

Water-Flo Gives Back

Water-Flo is working to give back to our communities and organizations that are important to us. For the month of November, the charitable organizations we supported were:

- Deep River Community Fund
- **Community Services of Madison**

Testing, testing, 1, 2, 3....

At Water-Flo, we understand the importance of having clean and safe water and air in your home. That's why we offer comprehensive testing for all of your water and radon concerns.

Our team is equipped to test for a variety of factors that can affect the quality of your water, including pH levels, contaminants, hardness, bacteria, iron, and even radon levels.

Water testing is instrumental in maintaining the health and safety of your household. By identifying and quantifying any issues with your water, testing helps ensure it is safe for use. Regular testing can also detect any changes in your water's composition over time, allowing for intervention and treatment. It's not just about safety, though. Hard water can cause damage to your plumbing and appliances, lead to dry skin and hair, and even affect the taste of your food and drinks. We can provide solutions to improve not only the quality of your water but also the quality of your life.

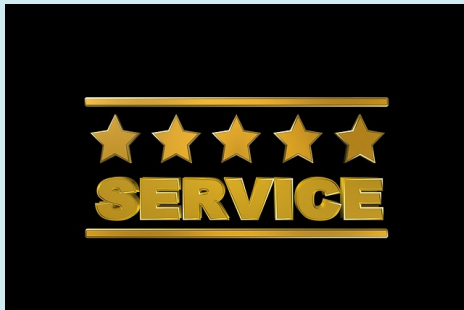

Radon testing is crucial given its potential threat. This naturally occurring radioactive gas is colorless, odorless, and tasteless, making it impossible to detect without professional testing. Radon exposure is a leading cause of lung cancer, second only to cigarette smoke. Radon can seep into your home through cracks in the foundation or walls, or from well water, which is why regular testing is recommended. At Water-Flo, we provide comprehensive radon testing, both in water and air, allowing you to breathe easy knowing your home is safe. And if radon is detected, rest assured, we also offer mitigation solutions to reduce its harmful impact.

Regular testing of your home's water and radon levels are preventative measures, akin to regular health check-ups. It enables early detection of potential hazards, allowing you to take action, and ensuring the safety and health of your family. At Water-Flo, we recommend regular testing not just for peace of mind, but because it plays a vital role in preserving

the quality of your life and health.

Water-Flo Reaches For the Stars!

"We recently had our water tank replaced, and it's evident that Jeremy possesses an impressive level of expertise in well water treatment. The quality of work was exceptional, with meticulous attention to detail evident in

every aspect of the installation. Jeremy was a pleasure to work with throughout the entire process. From his initial visit to assess our water system requirements to the final installation, he consistently demonstrated a high degree of professionalism. He patiently and thoroughly explained every step along the way."

Ask The Expert

Question:

I want to get my water and radon tested. How long does it take to get the results?

Answer:

For water tests, the turnaround time depends on what we are testing for. Bacteria, radon, and lead are common tests, all of which are sent to an independent lab for analysis. These results are usually available within a week. Testing for alkalinity, acidity, hardness, and specific minerals are done with a device called a Waterlink Spin Touch shortly after we collect the sample, so results are available in 1-2 days. Mineral analyses are complimentary.

We use two different types of radon tests. The continuous electronic testing system collects data over a few days and the results are available when our technician returns to pick up the equipment. Scintillation devices for radon detection adsorb radon over a period of time and need to be sent away for analysis, with the results available in about a week.

For all types of tests, Water-Flo will send a complete report when the data is available.

Water-Flo offers annual service plans for well pumps and water treatment systems. We recommend service plans for preventative maintenance and peace of mind. For more information on plan coverage, please visit our website or call the office at 800-732-7468.

We are your full service well pump, water treatment and radon company. Proudly serving Connecticut for over 30 years!
